TranS1 KeyStone™ MIS Pedicle Screw System

The TranS1 KeyStone™ MIS Pedicle Screw System is a simple, effective pedicle fixation system incorporating reliable rod delivery and dependable rod reduction. In less invasive procedures, the integrated extension tabs provide additional control and guidance during construct placement and locking.

FEATURES:

Integrated Extended Tab Screws

- Integrated extension tabs provide visual guidance for rod delivery and construct locking
- Efficient and robust hybrid square thread minimizes cross threading during rod reduction
- Dual lead cannulated screws provide for faster insertion

Simplified Instrumentation & System

- Screws and locking caps use common driver interface to reduce required instrumentation
- Reliable, over-the-skin rod length measurement
- Constraint collar provides excellent control and is removable for more flexibility

Product Offerings

- 5.5 mm, 6.5 mm, 7.5 mm and 8.5 mm cannulated screws available in lengths up to 60 mm
- 5.5 mm pre-lordosed rods available up to 160 mm length
- 5.5 mm straight rods available up to 220 mm length
